SEHIOR TWO LESSON MOTES:

TOPIC SIMULTANEOUS EQUATIONS.

This refers to apair of equations involving two unknowns and to be Solved at ago. The unknowns can be any two letters.

eg (i)
$$2x+y=6$$
 (ii) $p+q=17$ $3x+2y=10$ $2p+q=8$ e.t.c

There are 4 methods of Solving Simultaneous

1. ELIMINATION METHOD

2 SUBSTITUTION METHOD

3. GRAPHICAL METHOD

4 MATRIX METHOD

1. ELIMINATION METHOD

ex. Solve the Simultaneous equations using

$$\begin{array}{ccc} (i) & x+y=3 \\ x-y=11 \end{array}$$

0

Choose the letter (unknown) to eliminate

- eliminate oc by subtraction

$$x + y = 3 - - - (i)$$

 $x - y = 11 - - - - (ii)$
 $0 + 2y = -8$

51 de wone. 20-20=0 y = 2y 3-11=-8

$$\frac{2y}{2} = \frac{8}{2}$$
 $y = -4$

Substitute y = -4 in any of the two equations to get oc

put
$$y = -4$$
 in eqn (i)

side whe

 $5c + 3 + 2 = 4$
 $5c - 4 = 3$
 $5c$

or substitute y = -4 in eqn(ii) x - y = 11 x = 11 - 4x = 7

you use any of the two egns of your choice to acquire the 2nd unknown.

Side work

9+-y=0

3+11= 14

Alternatively:

eliminate y

$$x + y = 3 - - - (i)$$

+ $x - y = 11 - - - - (ii)$

2x + 0 = 14

Substitute X=7 in ... (ii)

1: x=7 and y=-4

HOTE!

- choose the unicnoun (one) to eliminate

- add or Subtract depending on the unichount to eliminate. Same coefficients and same signs we add

- To eliminate the intension of your choice

you add or Subtract and get Zero

- After gesting the valve of one unknown

substitute its value in any of the two equis

a+6=9

30+6=13 - --- (1)

a+b= 9 --- - (2)

Eliminate a.

a cannot be eliminate because

39-a= 29 so the Coefficients of a must be the Same to eliminate it.

To make them the same we multiply

Ane egn (1) by the coefficient of a of egn (2)

and vice versa

Coefficient of a in equ (1) is 3

Coefficient of a in eqn (2) is 1

1 x [39+6=13] - --- (1)

3x [a+b=9] ----(2)

3a+b=13 --- (1)

3a +3b=27 - - - (2).

O + 2b = -14

6=7

Side work

39-39=0

6-+36=

6-36=-26

13-27= -14

$$\frac{3a=6}{3}$$

So. a = 2 and b= 7

you can even checke whether your answers are correct.

ex.3.

$$2h = 4 - 3K$$

the same inknown underneath another.

To eliminate h

$$[2h + 3k = 4 - - - (1)] \times 3$$

 $[3h + 2k = 13 - - - (2)] \times 2$

or
$$\begin{bmatrix} 2h + 3k = 4 \end{bmatrix} \times 3 - 4 \end{bmatrix}$$

 $\begin{bmatrix} 3h + 2k = 13 \end{bmatrix} \times 2 - 4 \end{bmatrix}$

$$3h - \frac{28}{5} = 13$$

$$\left(3h \times 5\right) - \left(\frac{28}{8} \times 9\right) = 13 \times 5$$

ex.
$$2x - 3y = 12$$

 $3x = 1 - 4y$
Eliminate y
 $4x [2x - 3y = 12]$ - - - (ii)
 $8x - 12y = 48$ - - - (i)
 $-9x - 12y = -3 - - - (ii)$
 $17x = 51$
 17
 $3c = 3$
 $17x = 51$
 17
 $3c = 3$
 $2x3 - 3y = 12$
 $6 - 3y = 12$
 $6 - 3y = 12$
 $-3y = 6$
 $-$

or
$$4 \times \begin{bmatrix} 2x - 3y = 12 \\ 3x + 4y = 1 \end{bmatrix} - - - (i)$$

 $8x - 12y = 48 - - - (ii)$
 $4x + 12y = 3 - - - (ii)$
 $17x + 0 = 51$

$$\frac{17}{17} \propto = \frac{51}{17}$$

$$30 = 3$$

So x=3 y=-2. me unknown of

NB. when eliminating, Same coefficients and same signs we subtract unite eliminating, same coefficients and different signs we add.

SUBSTITUTION.

ex. Solve the simultaneous equations

using substitution

Choose any inknown from any of the two equs and make it the subject of the

Lets use oc of eqn. (1)

9

maker sc thre subject from eqn (1)

$$9C + y = 3 - - - (1)$$

 $x = 3 - y - - - - (3)$

$$pA = 3-y \quad \text{or} \quad eqn(3) \quad \text{in} \quad eqn(2)$$

$$x-y = 11 - - \cdot (2)$$

$$3-y-y=11$$

$$2-2y=11$$

$$3-2y=11$$
 $-2y=11-3$

$$\frac{-2}{-2}J = \frac{8}{-2}$$

$$y = -4$$

 $y = -4$ in eqn (3) or $pA = -4$ in eqn (1)
Using eqn (3) $x+y=3$

$$x+y=3$$

 $x+-4=3$
 $x=3+4$

X= 7

$$X = 11 - 4$$

3 -4 \$ x = 7

Substitute
$$y = 3 - 3c$$
 in $eqn(2)$
 $X - (3 - 3c) = 11$
 $X - 3 + 3c = 11$
 $2X = 11 + 3$
 $\frac{2}{2}X = \frac{14}{2}$
 $X = 7$

$$y=3-x$$

 $y=3-7$
 $y=-4$

So x=7\$ y=-4

or make y the Subject from $e_{2n(2)}$ X-y=11 $-y=\frac{11-x}{-1}$ $y=\frac{11}{1}-\frac{x}{-1}$ y=-11+x=---(3)

$$x + y = 3$$

 $x + (-11 + x) = 3$

$$0x_{1}$$
 $2h + 3K = 4 - - - (ii)$
 $3h + 2K = 13 - - - (iii)$

$$\frac{8h = 13 - 2k}{3}$$

Substitute
$$h = \frac{13-2k}{3}$$
 in (i)

$$2\left(\frac{13-2k}{3}\right) + 3k = 4$$

$$3x^{2}\left(\frac{13-2K}{3}\right) + 3K \times 3 = 4 \times 3$$

$$K = -\frac{14}{5}$$
 or $K = -2.8$

$$h = \frac{13 - 2K}{3}$$

$$= 13 - 2(-2.8)$$

$$= 18.6$$
 h= 6.2

Make any unknown of the two from any of
the equations, the Subject
the equations, the Subject
After making any unknown the Subject from
any equation Substitute It in the Other
equation (the other equation you havenet used
to make the unknown the Subject)

3. GRAPHICAL METHOD:

ex. Solve the Simultaneous equations

using graphical method.

x+y=3

x-y=11

- plot & draw two equations (lines) on a graph
- where they meet (point of Intersection) is the
Solution of the two simultaneous equations.

	2+	9=3	
X	0	3	
4	3	0	

When X = 0 0+y=3y=3 (0,3)

when y = 0x + 0 = 3 (3,0)

	X	1 = 11			
X	0	+	2	4	11
9	-11	-10	-9	-7	0

ex. Find the coordinates of the point of Intersection of the lines
$$3x+5y=-12$$
 $2x+y=-15$

(i) Using graph. 3x+5y=-12 x-4 0 | 1 -4-9

×	-4	0	1	-4	-9
J	0	-2.4	-3	0	3

$$3(6) + 5y = -12$$

$$\frac{5y}{5} = -\frac{12}{5}$$

$$x=1$$

$$3(1) + 5y = -12$$

$$3 + 5y = -12$$

$$5y = -12 - 3$$

$$5y = -15$$

$$5y = -3$$

$$4 = -3$$

$$4 = -3$$

$$x = -4$$

 $3(-4) + 5y = -12$
 $-12 + 5y = -12$
 $5y = -12 + 12$
 $5y = 0$
 $5y = 0$
 $5y = 0$
 $5y = 0$
 $5y = 0$

$$x=-3$$
 $y=?$
 $2(-3)+y=-15$
 $-6+y=-15$
 $y=-15+6$
 $y=-9$ $(-3,-9)$

$$x=0$$

 $2(0)+y=-15$
 $0+y=-15$
 $y=-15$ $(0,-15)$

when
$$y = 0$$
 $x = ?$

$$2x + 0 = -15$$

$$2x = -15$$

$$x = -7\frac{1}{2}$$
 $x = -7.5$

graph >

$$2x + y = -15 - - - (2)$$

Eliminate y

$$5 \times \left[2x + y = -15\right] - - - (2)$$

$$\frac{10x + 5y = -75 - - \cdot \cdot (2)}{}$$

$$-7 = 63$$

$$-7x = 63$$

point of intersection (-9,3)

```
(ii)
   Using Eustitution method
      3x+54=-12 --- (1)
      2 x + y = -15 - - - (2)
   Make y the Subject from eqn (2)
       2x+y = -15
          y = -15 -20c - -- (3)
    SUBStitute equ(3) in equ'(1)
       3x+5y= -12
       30c+5(-15-2x) =-12
       3x - 75 - 10x = -12
           - 70c = -12 +75
           -7x = 63
            oc = -9
    SWS+1+4+ X = -9 In eqn (3)
           y= -15 - 2 (-9)
           = -15 + 18
          9 = 3
    50 X= -9 Y=3
```

point of intersection (-9,3)

ex@ solve the simultaneous equations using graphical method.

-				= 1	X+J		
3	2	1	0	-1	-2	-3	00
					3.		

×	-3	-2	-1	0	,	2	3 _
4	5%	4/2	3/2	2/2	14	1 2	+ 1 a

graph

(1)

Eliminate oc

$$-2x + 2y = 5 - - - (2)$$

So the simultaneous equations have no solution

$$ex(2)$$
 $2x - y = 5$
 $3y - 6x = -15$

20	- 5 -	-		
x	0	1	2/2	r 2.5
y	-5	-3	0	

3y-6x = -13					
x	0	1	2/2	4	
9	-5	-3	0	3	

draby >

$$2x-y=5 --- (1)$$

$$-6x+3y=-15 --- (2)$$

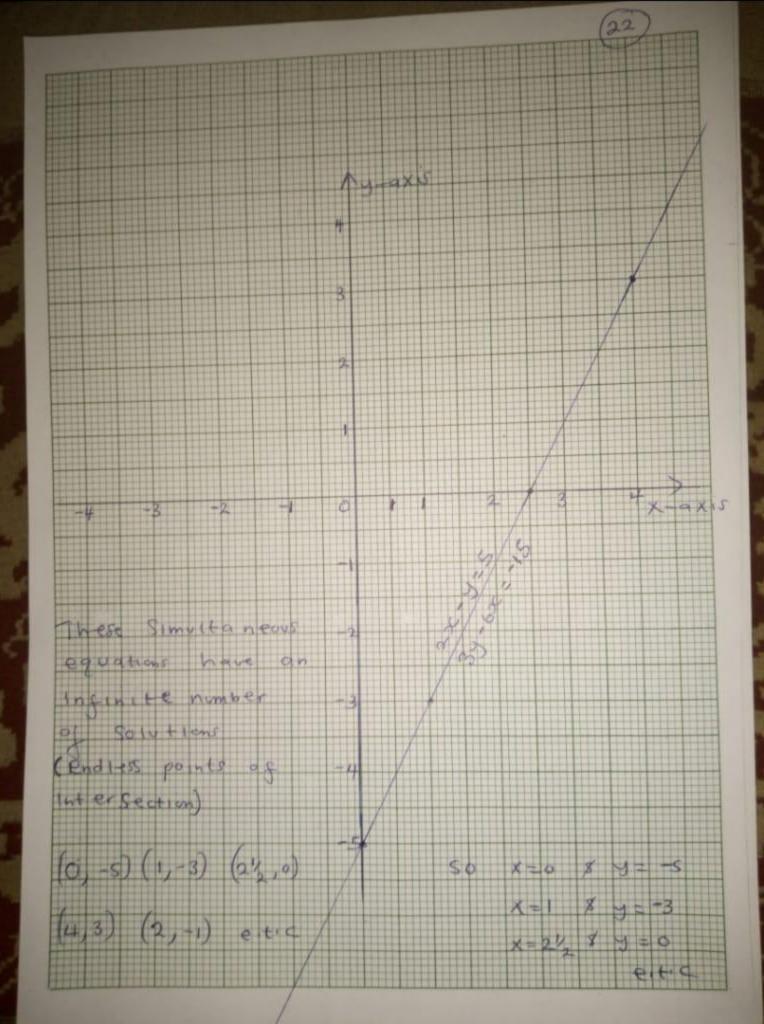

$$= 3 \times [2x-y=5] --- (1)$$

$$1 \times [-6x+3y=-15] --- (2)$$

or
$$3 \times [2x-y=5]$$

 $-1 \times [-6x+3y=-15]$ - - - (2)
 $6x - 3y = 15$ - - - (1)

The two equations are in fact the same equation - Every term in eqn(2) is three times the Corresponding term in eqn(1). These simultaneous equations have an infinite number of solutions

we win look at this method in form three after looking at matrices as a topic.

Mote:

when solving simultaineous equations despite the method used, the Same answers are acquired.

eng Take note of the 1st example we had x+y=3 x-y=11

When we used elimination, substitution

X=7 and y=-4. But if the method to be used is specified its the one union must be used to solve I work out the number.

USE OF SIMULTANEOUS EQUATIONS TO SOLVE PROBLEMS:

ex. The Sum of two numbers is 6 and their different is 4. find the numbers one number = >c

other number = y

0 +24 = 2

$$x+y=6$$
 --- (i) $\frac{2y=2}{2}$
 $x-y=4$ --- (ii) $y=1$
 $x+y=6$ ---- (ii) $y=1$

$$pA y = 1 \text{ in } e2h (1)$$

 $x+y=6$
 $x+1=6$

: The numbers are 5 and 1

Or using substitution method

Make of the Subject from eqn(1)

$$x+y=6$$
 $x=6-y---(3)$

Substitute oc= 6-y in eqn(2)

$$\frac{-2y}{-2} = \frac{-2}{-2}$$

pu y=1 in eqn (3)

$$x = 5$$
 So $x = 5 \times y = 1$

numbers are 5 and 1 : The

CX. SIX pens and 12 books cost sh. 102,000 and 4 pens and 4 books cost sh. 48,000 Find the cost of one pen and one book.

Let the cost of a pen be a.

11 11 11 a book be b

The equations can be even reduced

If there is a number divisible by all the
terms of the equation

$$\frac{6a + 12b = 102,000}{6}$$

$$0 + 2b = 17,000 --- (1)$$

Eliminate a.

a = 17,000 - 10,000
a = 7,000

The cost of a pen is sh. 7,000

ex. Obreen bought 3 books and 5 ruters at sh. 9.700 if he had bought 2 books and 8 rulers he would have Spent sh. 900 less. Calculate the cost of each item.

Let the cost of a book be of

3x + 5y = 9700

2x + 8y = 9700-900

3x + 5y = 9700 - - - - (1)

2x+8y= 8800 - - - - (2)

Make y the Subject from --- (2)

2x +8y = 8800

89 = 8800 - 270

J = 8800 - 22c - - - (3)

pa y=8800-20c in --- (1)

$$30c + 5\left(\frac{8800 - 20c}{8}\right) = 9700$$

$$\frac{140c}{14} = \frac{33,600}{14}$$

$$x = 2,400$$

"." The book costs sh. 2,400 and the ruler costs sh. 500.

ex. Hayden bought 5 sackets of washing powder and a tube of tooth paste at sh. 1,700 in January and in February he bought 15 sackets of washing powder and 2 tubes of toothpaste at shs. 4,400 unat was the price of each Iten during the 2 months.

cost / price of a sacket of washing powder = m price of a ture of toothpaste = L

5m + L = 1700 - - - (i) 15m + 2L = 4,400 - - - (ii)

2 x [5m + L = 1700] -- (i) 15m + 2L = 4400 - -- (ii)

> 10m + 2L = 3400 --- (i) - 15m + 2L = 4400 - -- (i)

-5m +0 = -1000

-5m = -1000 -5

M= 200

Substitute M = 200 in egn (ii)

15 x 200 + 2L = 4,400

3000 + 26 = 4,400

2L = 4,400 - 3000

2L = 1400 L= 700

HOTE

For this part of application (use of Simultaneous equations to solve problems bumbers)]

Mainly use the elimination and substitution

Methods; due to the big numbers involved.

ACTIVITY

1. Solve the Simultaneous equations using illimination method

(i) substitution method.

(a) x+y=3

4x-3y=5

(b) 5x - 2y - 1 = 0

3x+2y+9=0

2. Solve the Simultaneous equations using

the graphical method.

5x-y=5

10x+y=-2

3. Find the point of intersection of these Simultaneous equations 11a = -16+3b

7a+5b=-24

- 4 Obtain the Coordinates of the point of Intersection of the lines below using graphs
- (a) 2x y = -32x - y = 5
- (b) 2x + 3y = 74x + 6y = 14
- 5. Work out the solution set of the simultaneous equation

2h = -7k - 11

4h + 14K = -22

- 6. Look for two numbers unose difference is 4 and their product is also 4.
- 7. Marvin bought 5 tins of Jam and 3 tins of blue band from a supermarket for shs. 7.420 unite maureen bought 3 tins of jam and 5 tins of blue band for shs. 7780. How much was
- (i) a tin of Jam
- (ii) a tin of blueband.
- 8. A house wife bought 2kg of rice and 4kg of maize flow for sh. 10,800. The next week she bought 3kg of rice and 3kg of maize flow and spent sh. 12,600. unat was the price perky of rice and maize flow?

Determine the cost of

(i) a school bag

(ii) a pair of shoes.

Canteen during breaktime. Samalie spent Sh. 2000 for 2 chapatis and 2 packets of pop corns while Maria spent Sh. 400 more than Samalie for 3 chapatis and a packet of pop corns.

Calculate the Cost of each item.

Practice makes math easier.
Our lovery daughters; wash hands
Stay home
Stay stage.

0706075006.
